

# Four moves in one; Changing the infrastructure

Van Lanschot

*Van Lanschot Bankiers was looking for a highly stable environment, available and fast, so that transactions can be sent directly to the market in real time*

*Econocom took care of the hardware upgrade, new operating system rollout, migration and management.*

- Migration of old servers to new data centers, managed by Econocom
- Install new servers (Power 7 Model 720) and new operating system (i5 OS V7R1) at the data centers
- Stability, speed and reliability
- 24/7 monitoring and maintenance

*"Everything went very smoothly. The number of incidents we had afterwards – all of which you would consider 'normal' for this kind of migration – were far fewer than we'd initially expected. That shows, for me, the professionalism of Econocom."*

Peter Oosterlinck – ICT Director

Migration and Upgrade of environments

High availability private-cloud in a hosted and managed environment
